Career Objective

Final-year Information Technology student at University of Transport Technology specializing in Mobile Application Development. Experienced in designing responsive, high-performance Flutter user interfaces, implementing state management (GetX, BLoC), and integrating RESTful APIs from backend services. Seeking a Flutter Developer role to build performant, user-centric mobile applications.

Technical Skills

Languages: Dart
Mobile Development: Flutter (GetX, BLoC), Responsive UI (flutter_screenutil), Material Design
Databases & Local Storage: MySQL, Flutter Secure Storage
Developer Tools & Practices: Git, GitHub, ClickUp, VS Code

Technical Projects

Traffic Hub | *Frontend Developer (Team of 5) – Flutter, GetX, WebSocket* | Source Code Jan 2026 – Apr 2026

- Developed the cross-platform mobile frontend with Flutter and GetX within a 5-member team, delivering real-time community traffic monitoring, interactive feed interactions, and instant emergency alerts.
- Implemented secure client-side authentication and session persistence utilizing flutter_secure_storage for encrypted token caching and seamless auto-login, communicating via backend RESTful APIs.
- Optimized user profile and feed rendering by integrating infinite-scroll pagination, network image caching, and widget rebuild minimization to eliminate UI stuttering and reduce redundant network requests.
- Integrated OpenStreetMap via flutter_map to render interactive map layers and dynamically plot real-time hazard markers derived from community post geo-coordinates.
- Engineered a low-latency Emergency SOS broadcast system using a persistent WebSocket connection, streaming real-time GPS coordinates and incident metadata for rapid emergency response.
- Managed source control via Git and tracked sprint milestones, task assignments, and project deliverables using ClickUp.
- Awarded Consolation Prize at the University of Transport Technology's Innovation Challenge 4.0 competition.

Education & Awards

University of Transport Technology Hanoi, Vietnam

Bachelor of Science in Information Technology (Current GPA: 3.12 / 4.0) *Expected 2027*

- Consolation Prize – Innovation Challenge 4.0 (2026): Awarded by University of Transport Technology for developing the Traffic Hub community traffic navigation and emergency assistance platform.
